# ACHMAD NABIL

Backend Engineer

Jakarta, Indonesia | +62 821 3541 2527 | nabileldruzo@gmail.com | linkedin.com/in/eldruzo

## SUMMARY

Backend Engineer with nearly five years building and operating mission-critical financial and ERP systems, now applying that background to Southeast Asia's real-time payment infrastructure at Brick. Deep expertise in Node.js, TypeScript, and GraphQL, with hands-on Stripe and Adyen payment integration experience at 60K+ user scale. Track record as a production gatekeeper for high-severity incidents, owner of idempotent webhook and finance-reconciliation systems, and cross-functional team lead in English-first, cross-cultural environments. Currently deepening Go for backend service work.

## SKILLS

**Backend:** Node.js, TypeScript, JavaScript, Express, GraphQL (Apollo), REST API design; ramping up on Go

**Databases:** MongoDB (schema design, aggregation pipelines, indexing); PostgreSQL & MySQL with Sequelize (schema design, JOINs, query optimization)

**Payments:** Stripe and Adyen integrations, webhook handling, idempotent event processing, auto-debit workflows, dispute and chargeback handling

**Reliability & Architecture:** Red Alert incident management, root cause analysis, microservices, modular monolith, event-driven and webhook-based design

**Testing:** Jest (unit, integration), Playwright (E2E)

**Leadership:** Cross-functional Agile team leadership, code review, mentoring and onboarding new hires

**Languages:** Indonesian (native), English (professional working)

## EXPERIENCE

### Backend Engineer — Brick

Jul 2026 – Present

*Jakarta, Indonesia*

Brick is building Southeast Asia's #1 Financial API Platform for fintechs, democratising access to financial services by letting fintech developers create easy, accessible experiences for their users.

- Take responsibility for the technical development of Brick products.
- Participate in the organization and planning of development resources and schedules.
- Organize and facilitate stand-ups, reviews, retrospectives, sprint and release planning, demos, and other stakeholder meetings.
- Study websites and apps for network traffic analysis between the application and third-party network endpoints.
- Infer behaviors and build proofs of concept to replicate application behavior in other environments.
- Write SQL queries, stored procedures, and functions to support cross-divisional data updates and retrieval.
- Develop new features and bug fixes for applications and services across the Brick system.
- Monitor database health and performance, troubleshoot issues, and implement solutions.

### ZettaByte Pte Ltd

4 years 9 months

*Yogyakarta, Indonesia*

#### Senior Back-End Developer / Expert

Dec 2024 – Mar 2026

- Served as one of the final technical gatekeepers for backend releases across EDH and ADMTC, the company's education ERP platforms for major European clients.
- Acted as company-wide escalation point for the most complex backend issues, including finance edge cases and cross-service distributed failures.
- Owned end-to-end resolution of Red Alert production incidents: triage, root cause analysis, and permanent fixes that prevented recurrence.
- Optimized MongoDB aggregation pipelines, indexes, and GraphQL resolver patterns (including N+1 fixes) to keep response times stable through high-traffic billing cycles.
- Informally supported onboarding of a new team lead during 2025 while continuing focused senior technical contribution.
- Integrated Claude and Gemini into the team's development workflow as code- and test-generation accelerators, retaining final architectural oversight on merged output.

#### Senior Back-End Developer

Jan 2024 – Nov 2024

- Maintained and extended Stripe and Adyen integrations on EDH: webhook event processing, auto-debit metadata, and coverage from payment trigger through dispute and chargeback handling.
- Served as trusted pre-production code reviewer, maintaining architectural consistency across the engineering team.
- Resolved customer-reported production tickets via YouTrack: triaging, debugging, patching, and confirming resolution under SLA.
- Authored a complex DAX measure for a Power BI dashboard with point-in-time student status filtering, sourced from PostgreSQL CDC data mirroring MongoDB master data.

**Quality Assurance Division Manager** Nov 2023 – Dec 2023

- Led the QA division and engineering quality processes during an internal restructuring.
- Gained cross-functional exposure to testing strategy, quality coordination, and team management.
- Stepped down by mutual agreement after the trial period, returning to senior backend engineering.

**Senior Back-End Developer** Jun 2022 – Oct 2023

- Led a cross-functional Agile team (backend, frontend, QA) owning EDH's core finance module — student billing, auto-debit, and financial reconciliation — reaching and maintaining near-zero finance incidents.
- Scaled the finance module from ~15,000 students at initial release to 60,000+ users across 10+ institutions.
- Maintained and extended Adyen payment integrations, increasing successful transaction rate.
- Built and maintained GraphQL and REST APIs (Apollo + Mongoose + Express) on Node.js with disciplined schema design and resolver optimization.
- Delivered features with Node.js, TypeScript, and Sequelize on PostgreSQL/MySQL, and Mongoose on MongoDB.
- Coordinated Red Alert production incidents in a distributed monolith architecture, minimizing downtime through rapid triage.

**Junior Back End Developer / Team Lead** Feb 2022 – Jun 2022

- Promoted to Team Lead seven months after joining, leading a cross-functional Agile team on EDH platform features.
- Coordinated tasks via Developer/QA checklists and mentored teammates across backend, frontend, and QA roles.
- Resolved a Red Alert incident by diagnosing Nginx and SSL configuration issues, restoring service.

**Fresher Back End Engineer** Jul 2021 – Feb 2022

- Built backend features for EDH in Node.js, JavaScript, and GraphQL under senior mentorship.
- Built third-party REST API integrations from scratch: DocuSign, HubSpot, and Oscar Campus.
- Mentored newer hires and facilitated onboarding bootcamps.

**College Intern — Dinas Komunikasi dan Informatika Kota Pekalongan** Feb 2019 – Mar 2019

- Audited Simpatikk, a web-based cover letter management application, identifying deficiencies and providing improvement recommendations.

## EDUCATION

**S.Kom, Management Information Systems — STMIK Widya Pratama, Pekalongan** 2016 – 2020

*Best Graduate Student, Information Systems major*

**SMAN 1 Pekalongan** 2013 – 2016

## CERTIFICATIONS

- Dicoding Developer Conference, 2026
